APS Industrial partner with Grace Engineered Products as national distributor

APS Industrial are pleased to announce a national distribution agreement with Grace Engineered Products in Australia. Based in Iowa, USA, Grace Engineered Products is a leader in electrical safety product solutions that increase productivity and endeavour to exceed electrical workplace safety standards.

As part of this national distribution agreement, APS Industrial will bring to market a complete range of Permanent Electrical Safety Devices (PESDs) led by the GracePESDs® range of voltage indicators and the GracePort® range of communication ports.

“The Grace Engineered distribution agreement forms a very nice addition to our growing product portfolio and will particularly appeal to switchboard and control panel builders. These quality voltage indicators, test points and combination PESDs promote a safe work environment and save lives,” said David Hegarty, Managing Director of APS Industrial.

“In addition to local stockholdings we can also draw on the required technical expertise to support these ranges – it’s another exciting outcome that is designed to better serve local customers with highest levels of customer service and delivery”, Mr Hegarty continued.

For more information on the Grace Engineered Products range from APS Industrial, contact your local Sales Representative or visit apsindustrial.com.au
